

# Center Report from KMA

## Forecasting System Operation & Research

Dong-Joon Kim  
Numerical Prediction Office  
Korea Meteorological Administration

- ❖ KMA's Operational NWP System Overview
  - Hardware and NWP Systems
  
- ❖ Major R&D Activities in 2014 and Performance
  - Operational NWP System upgrade
  - Verification Scores
  - KIAPS Development
  
- ❖ Further Development / Research Plans

# Operational NWP Systems

## Hardware(HPC) and Software

KMA

Korea Meteorological Administration

# Current Operational HPC (Cray XE6)

Main System  
(20 Cabinets, 379TFlop/s)

Backup / R&D System  
(20 Cabinets, 379Tflop/s)

<i>Ref</i>	<b>Main (HaeOn)</b>	<b>Backup (HaeDam)</b>	<b>Total</b>
<i>Installation Year</i>	2010. 12		
<i>Core Number</i>	45,120	45,120	<b>90,240</b>
<i>Core Type</i>	AMD 2.1 GHz, 12 core		
<i>Peak performance</i>	<b>379 TF</b>	<b>379 TF</b>	<b>758TF</b>
<i>Main Memory</i>	60 TB	60 TB	<b>120TB</b>
<i>Capacity of Disk</i>	4 PB		
<i>Capacity of Tape drive</i>	8 PB		
<i>OS</i>	Suse Linux 11		

# New HPC Introduction

- ❖ Contract : June 2014
- ❖ Installation of Initial Stage System : November 2014
- ❖ Installation of Final Stage System : Q4 2015

System architecture	Peak Perf. (TF)	Processor type & Memory	# Nodes	Login nodes	I/O System
<b>CRAY XC40-LC (3 cabinets)</b>	<b>447</b>	Intel haswell 2.6GHz 24cores/node 128GB/node	computational (448nodes) Pre-post (12nodes)	4 set	3.3PB > 50GB/sec
<b>CRAY XC40-LC (16 cabinets*2set)</b>	<b>5,800</b>	Intel haswell 2.6GHz 24cores/node 128GB/node(comp) 258GB/node(pre-post)	computational (2,904nodes*2set) Pre-post (56nodes*2set)	8 set	> 13.5PB > 248GB/sec

- ❖ The initial stage system (Uri) was ranked #148 on Top 500 list (Nov.2014)

# Operational NWP Systems

## Global Medium-range Prediction

- Deterministic : UM 25km L70 / T+288hrs (00/12UTC), T+87hrs (06/18UTC) / Hybrid Ensemble 4DVAR
- Ensemble : UM 40km L70 / T+288hrs (00/12UTC) / 24 Members / Perturb. : ETKF, RP, SKEB2

## Short-range Prediction (E-Asia)

- UM 12km L70 / T+87hrs (6 hourly) / 4DVAR / Deterministic

## (Very) Short-range Prediction (Local)

- Deterministic : UM 1.5km L70 / T+36hrs (6 hourly) / 3DVAR (3 hourly)
- Ensemble : In preparation (Q3 2015)

# Operational NWP Models (March '15)

	Model	Resolution	Target Length	Target / Purpose
Seasonal	GloSea5(Global)	N215(60km) L85	220 days(M2) 60 days(M2)	Seasonal prediction (~6months)
Medium-range	GDAPS (Global)	N512(25km) L70	T+288 (00/12) T+87 (06/18)	Global deterministic
	Global EPS (Global)	N320 L70 M24	T+288	Global probabilistic
(Very) Short-range	RDAPS (E.Asia)	12km L70	T+87	East Asia / Short-range
	LDAPS (Korea)	1.5km L70	T+36	Korea / Short-range
	KLAPS (Korea)	5km	T+12	Korea / Very short-range
Applica-tion Models	Wave Watch III	55km	T+288	Global
		8km	T+87	Northeast Asia
		1km	T+72	Coastal
	ADAM (Dust & Aerosol)	30km	T+72	Asia dust
	DBAR (Typhoon)	35km	T+72	Track
	Tide/Storm Surge	9km	T+87	Northeast Asia

# Operational NWP Models (March '15)

**GloSea5 : UM (N216L85)+NEMO(ORCA025L75)**

- 60 days prediction(2Mem) : weekly prediction (~ 8weeks)
- 220 days prediction (2Mem) : monthly prediction(~ 6months)
- Hindcast(42Mem=3Mem/yr): 1996~2009(14 years)

# Major Upgrades in 2014 and NWP Performance

KMA

Korea Meteorological Administration

# Operational System Upgrade (2014)

## ❖ Global NWP System (GDAPS)

- No major upgrade in 2014
- MetOp-B (ATOVS, IASI) data is used since Nov. 2013

## ❖ Regional NWP System (RDAPS)

- Revision of **Background Error Covariance** for the East Asia domain

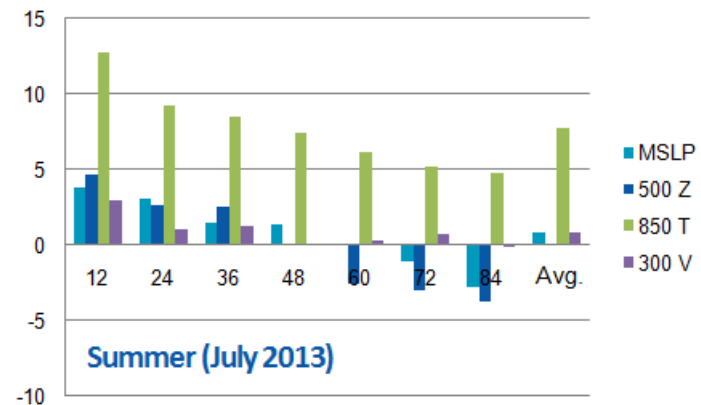

### T+12 Forecast Error

- Reduction of Continental (China) Warm Bias in the New D.A. System
- **Software version upgrade** of observation pre-processing (OPS), variational D.A. (VAR) and atmospheric model (UM)
- Ancillary data (LAI) update : Heat/Moisture flux improved

# Operational System Upgrade (2014)

## ❖ Regional NWP System (RDAPS) - continued

Percentage Improvement (New vs. Oper.) / RMS Error / Verification against Analysis

## ❖ Local NWP System (LDAPS)

- Software version upgrade of atmospheric model (UM)
- Physics configuration update : Improvement of surface temperature and fog prediction performance

# Operational Global Model Performance

500 hPa Geopotential Height RMS Error / N.H.

# Operational Global Model Performance

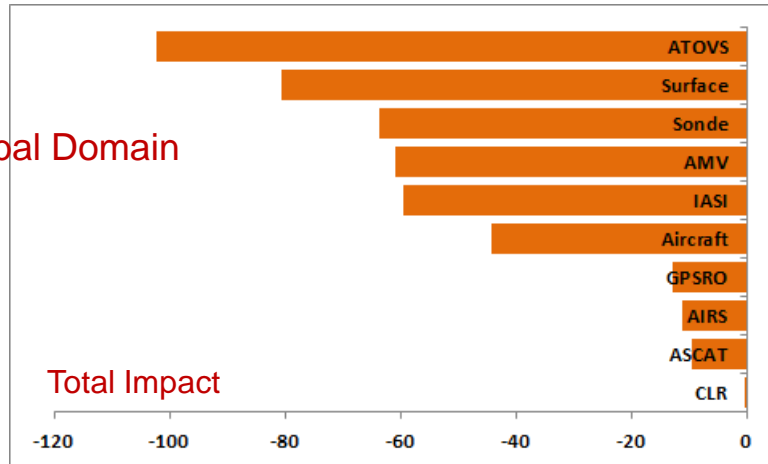

500 hPa Geopotential Height RMS Error / S.H.

# Forecast Sensitivity to Observation

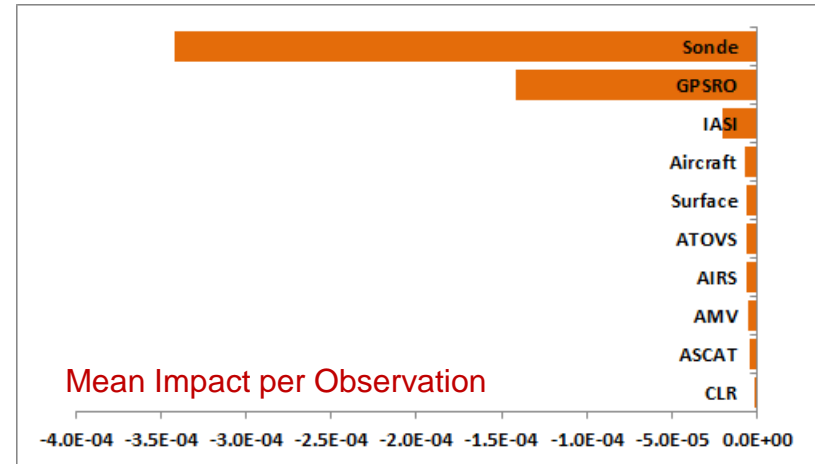

- FSO based on the operational global NWP system

- Global Domain

Satellite Data 58% , Non-Satellite Data 42%

(Dry Energy Norm, J/kg)

Mean Impact per Observation

Sonde >> GPS\_RO > IASI (vertical sounding)

- East Asia Domain

Impact of **Synoptic Obs. (Sonde)** is still dominant in the East Asia domain

Mean Impact per Observation

# KIAPS Development

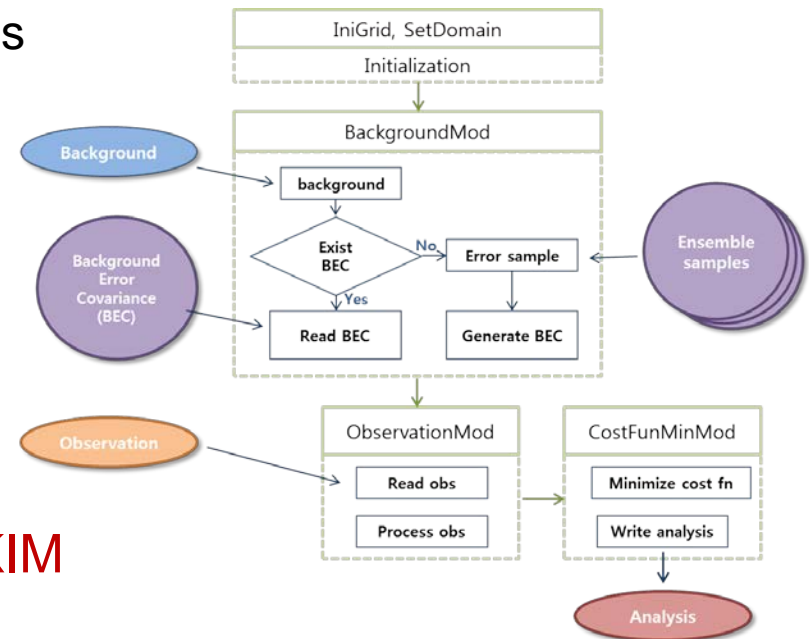

Korea Institute of Atmospheric Prediction Systems (2011~2019)

# Major Achievement in 2014 (D.A.)

## ❖ Building 3DVAR System on a Cubed-Sphere

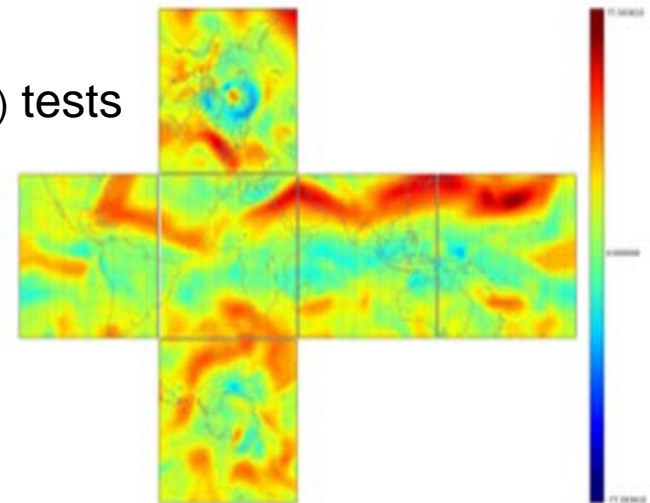

- 3DVAR system on a cubed-sphere
  - Spectral filter and Eigenvalue analysis
  - Background error covariance
- Variable transform method
- Improvement of **cost-function minimization**
  - enhanced computational efficiency
- **Combination of 3DVAR system and KIM (KIAPS Integrated Model)**
  - Successful generation of analysis field via 3DVAR

# Major Achievement in 2014 (Model)

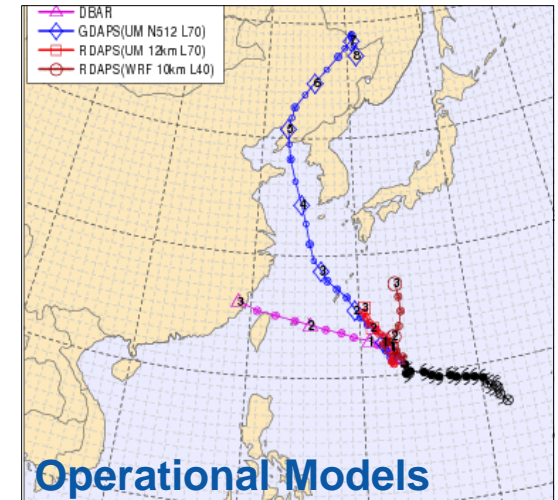

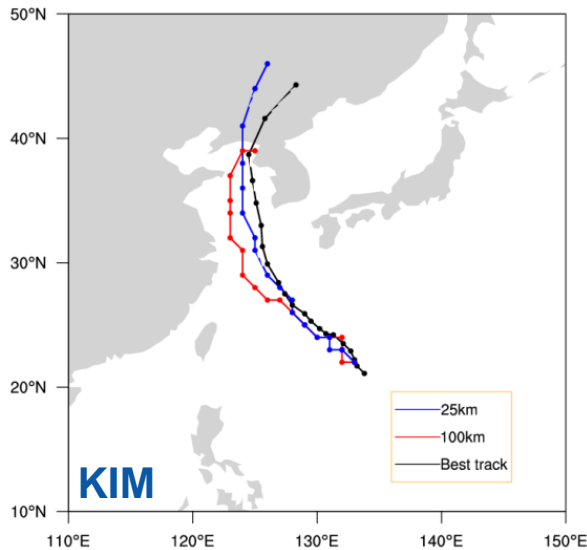

## ❖ Building $\beta$ -version of KIAPS global model

- Horizontal resolution : 25km (ne120np4)
- 50 vertical layers / Top = 0.3hPa
- Dynamical core : Hydrostatic/Non-hydrostatic system on a cubed sphere (based on CAM-SE HOMME)
- Dynamical core and physics packages are successfully combined
- Preliminary Evaluation
  - DCMIP(Dynamical Core Model Intercomparison Project) tests
  - Severe weather events
  - Medium-range (10-day) experiments

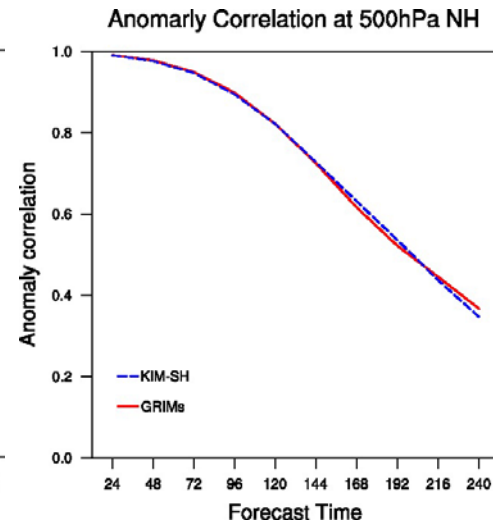

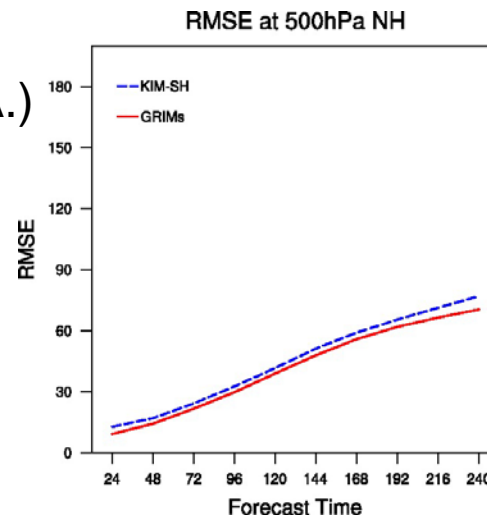

# KIM Results

## Typhoon Bolaven Case (August 2012)

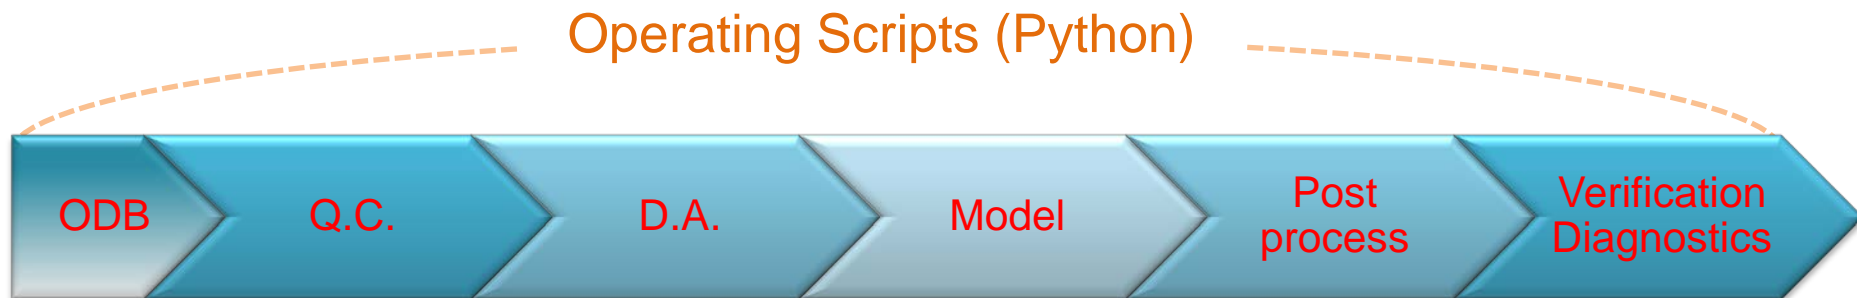

- Initial Condition : GFS Analysis (No D.A.)
- Verification score from 10-day forecast for a month (July 2013)
- RMSE, AC are comparable to the reference model

# KIAPS Development Plan for 2015

## ❖ Further development of $\beta$ -version KIAPS NWP System

- Complete building a 3DVAR-EnKF Hybrid D.A. cycling system
  - Design end-to-end system from observation data acquisition to post-processing/verification system
- Refine dynamical core and physics package of KIM
  - More emphasis on **non-hydrostatic version**
- (Near) real-time run and evaluation of KIM system

# On-going Research/Development and Further Plans

KMA

Korea Meteorological Administration

# Convective scale EPS

## Local ENsemble prediction System (LENS)

- Resolution : 3km (horizontal) / 70 vertical layers (~40km)
- Target length : T+45 hours (03/15UTC)
- # of Members : 11+1 (or 23+1)

- Initial Perturbation : from global EPS (LETKF to be tested)
- Model Perturbation : None (Random Parameter to be tested)

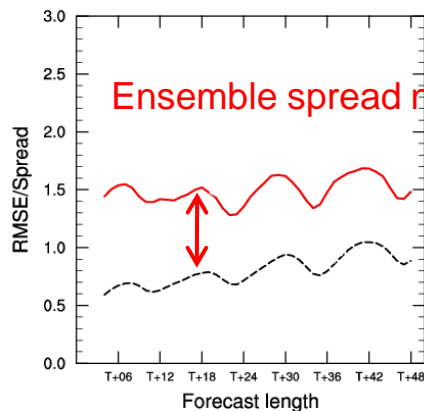

- Planned to be in Operation in Q4 2015

# Convective scale EPS – Preliminary Evaluation

- Rank histogram and time series show **small ensemble spread**
  - Initial ensemble spread needs to be increased
- Warm temperature bias and negative 10m wind bias

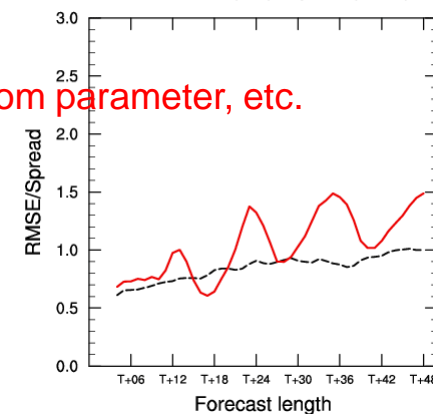

SFCT - rmse(red), spread(black)

WSPD - rmse(red), spread(black)

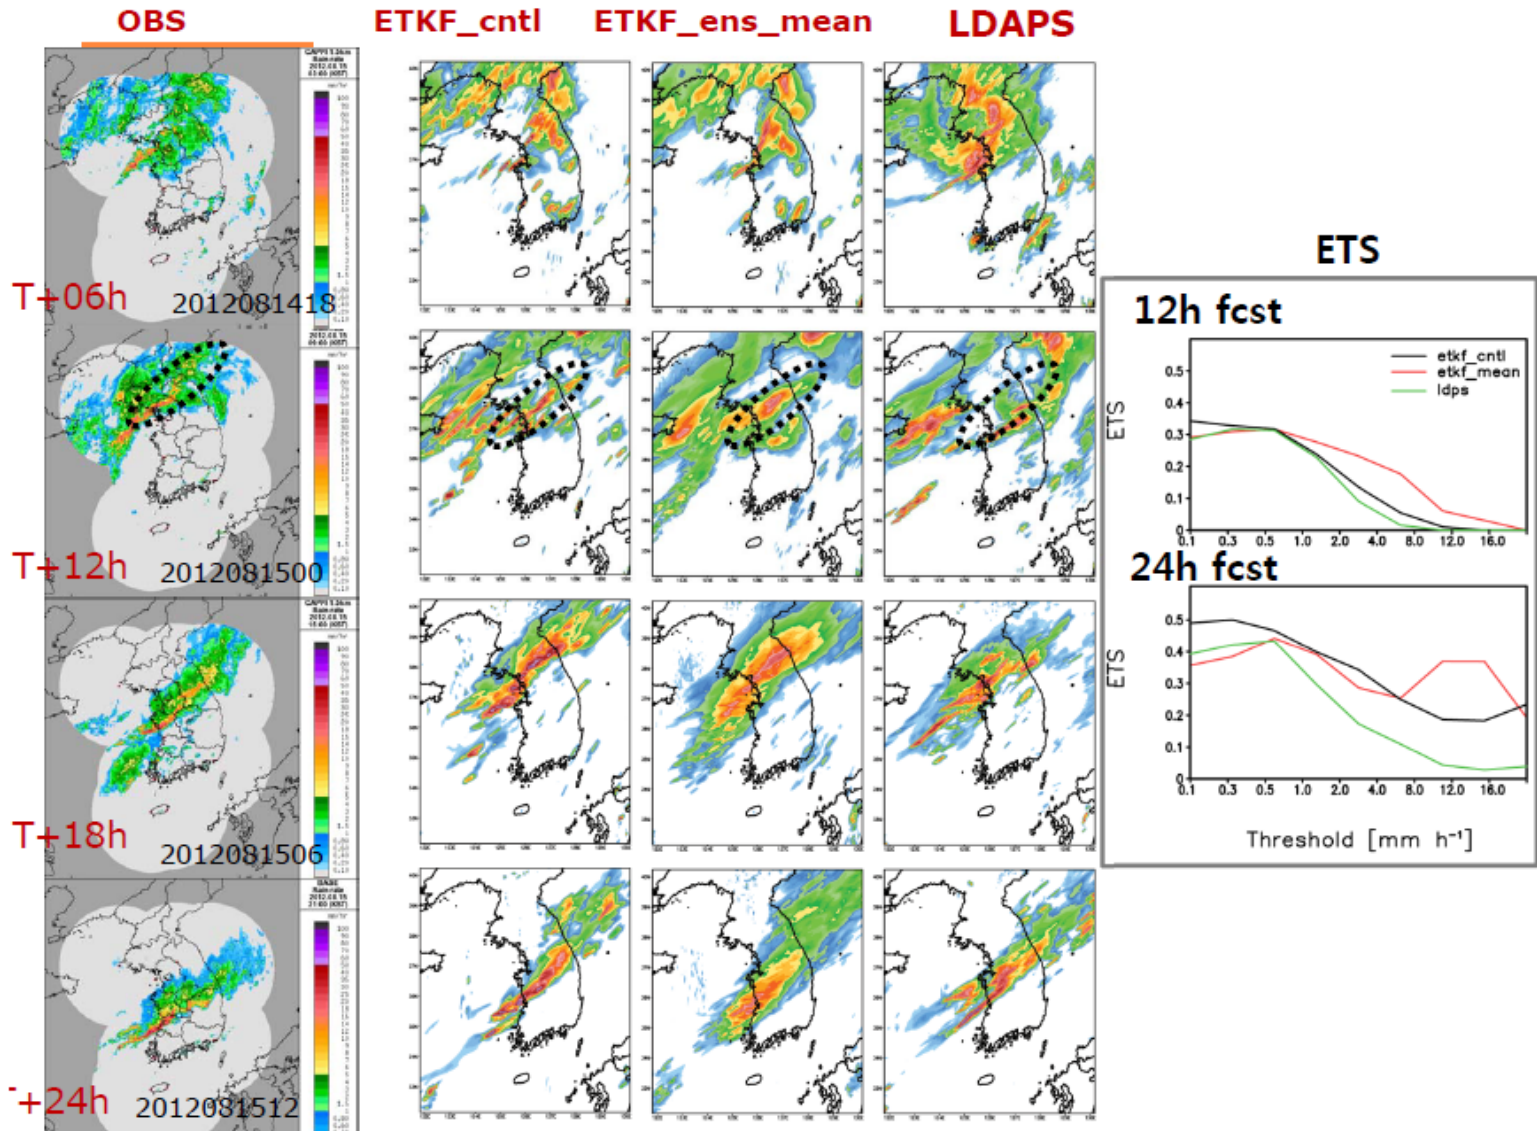

MSLP - rmse(red), spread(black)

Ensemble spread needs to be increased by random parameter, etc.

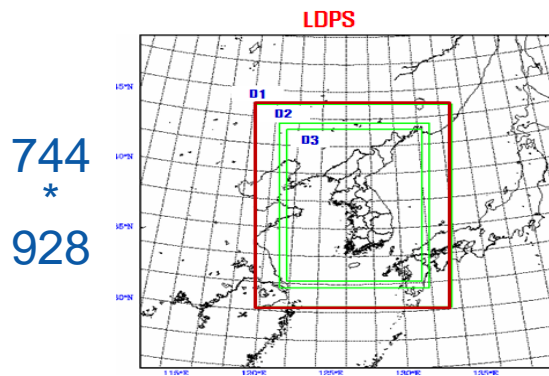

# Convective scale EPS – LETKF Initialization

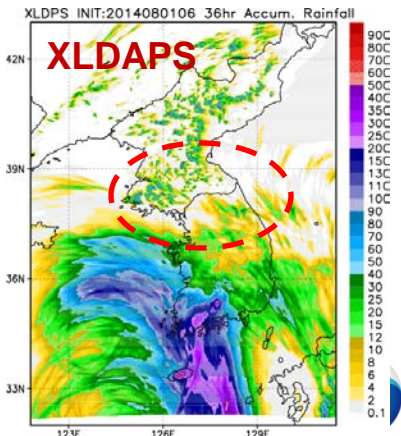

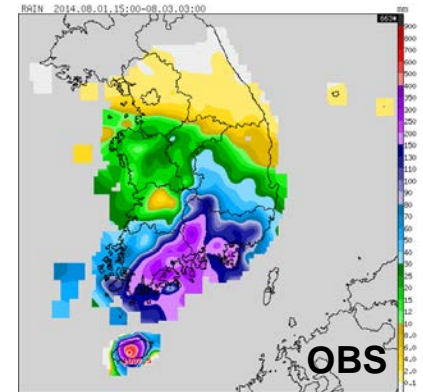

# Further Development of Local NWP System

- ❖ Expanding the outer (low-resolution [4km]) domain
  - Mitigating negative impact of lateral B.C. from global model which sometimes degrades the forecast accuracy

Typhoon NAKRI case  
(July 2014)

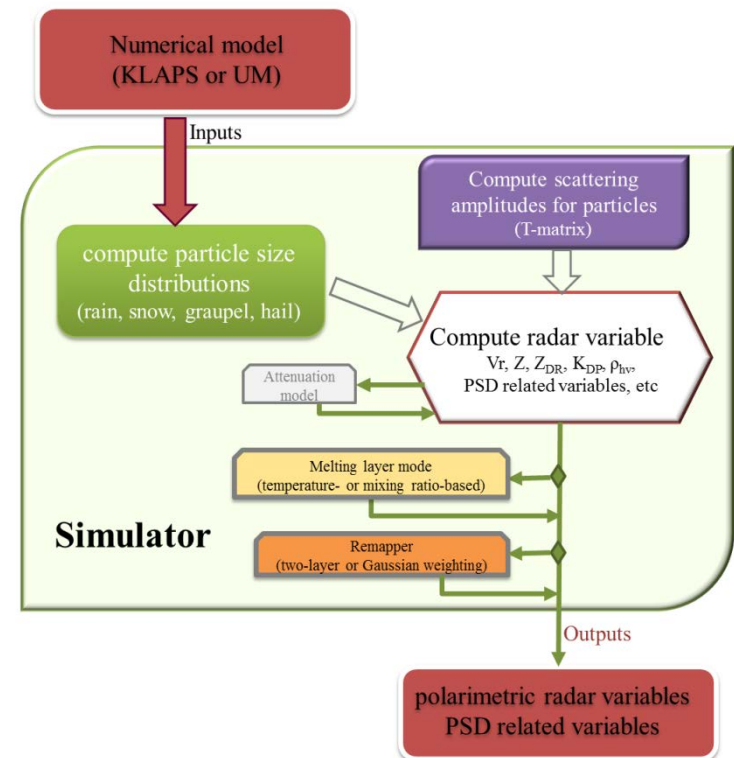

- 36hr accumulated rainfall amount

# Further Development of Local NWP System

## ❖ Development of Atmosphere-Wave Coupled System

- Coupling of **LDAPS(UM)** with **WaveWatch III** using **OASIS-MCT** coupler
  - Considering the air-sea interaction to enhance the short-range forecast performance
- **Optimization of physical parameterizations** (especially **microphysics** scheme) using dual polarization radar and single column model

# Summary of Future Plans

KMA

Korea Meteorological Administration

# Future Plans (Development Strategy)

## Medium-range NWP (Global Model)

- Collaboration among UM Community (UK Met Office, CAWCR, etc.)
- 17km resolution Global NWP System with ENDGame DyCore
  - Real-time run and evaluation ('15)
  - **Operational Implementation ('16)**
- ✂ Use of additional observation (CrIS, ATMS, etc.)

## Short-range NWP

- Tuning / Optimization of operational short-range NWP systems
  - LDAPS domain expansion ('15)
  - Atmosphere-Wave coupled LDAPS (~'16)
- Local ensemble prediction system (LENS)
  - Operational implementation ('15)
  - Enhancement of initial perturbation, etc. ('16)

# Future Plans (summary table)

Year	2015	2016	2017
HPC	Cray XE6 Cray XC40 (1 <sup>st</sup> stage)	<b>Cray XC40</b> (final stage)	
Short-range Deterministic	12km L70 / 4DVAR (East Asia Domain) [Frozen with minor upgrade (new observation, etc.)]		
	1.5kmL70 / 3DVAR Extended Domain	1.5kmL70 / 3DVAR (-> 4DVAR?) Extended Domain / <b>WW3 Coupled</b>	
Short-range Ensemble	3kmL70 12M (Newly Operational)	3kmL70 12M~24M (ETKF / Random Parameter)	
Medium-range Deterministic	25kmL70 Hybrid 4DVAR	<b>17kmL70 (ENDGame core)</b> Hybrid 4DVAR	
Medium-range Ensemble	40kmL70 24M	32kmL70 (or 25km) 24(44)M (ENDGame core)	
Seasonal Prediction	GloSea5 [60kmL85 (Atmos.) / 0.25deg L75 (Ocean)] Met Office – KMA joint seasonal prediction system
