WORLD  
METEOROLOGICAL  
ORGANIZATION

# The Year of Polar Prediction

**Mission:** Enable a significant improvement in environmental prediction capabilities for the polar regions and beyond, by coordinating a period of intensive observing, modelling, verification, user-engagement and education activities.

Launch of PPP  
(2011)

Preparation Phase  
(2013-17)

Core Phase  
(2017-2019)

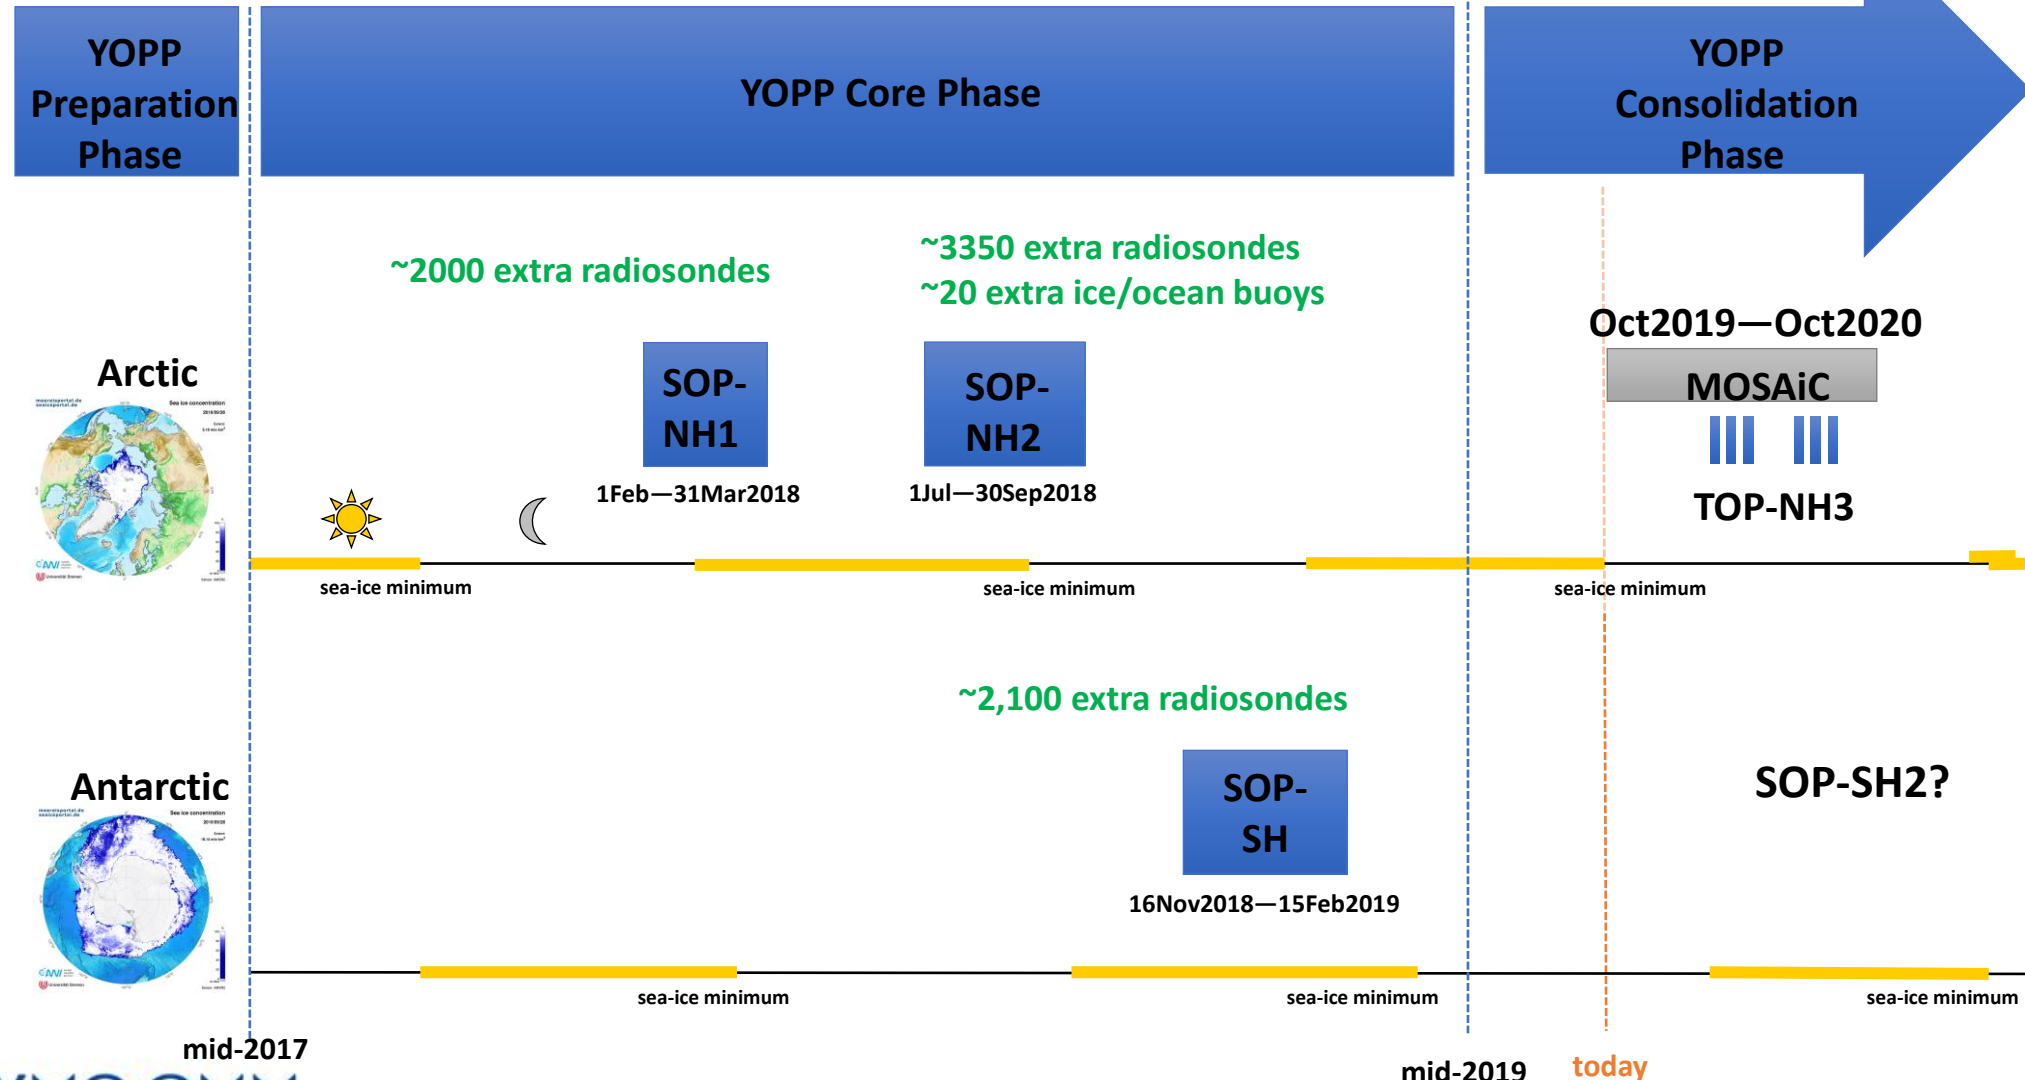

Consolidation Phase  
(2019-2022)

YOPPsiteMIP

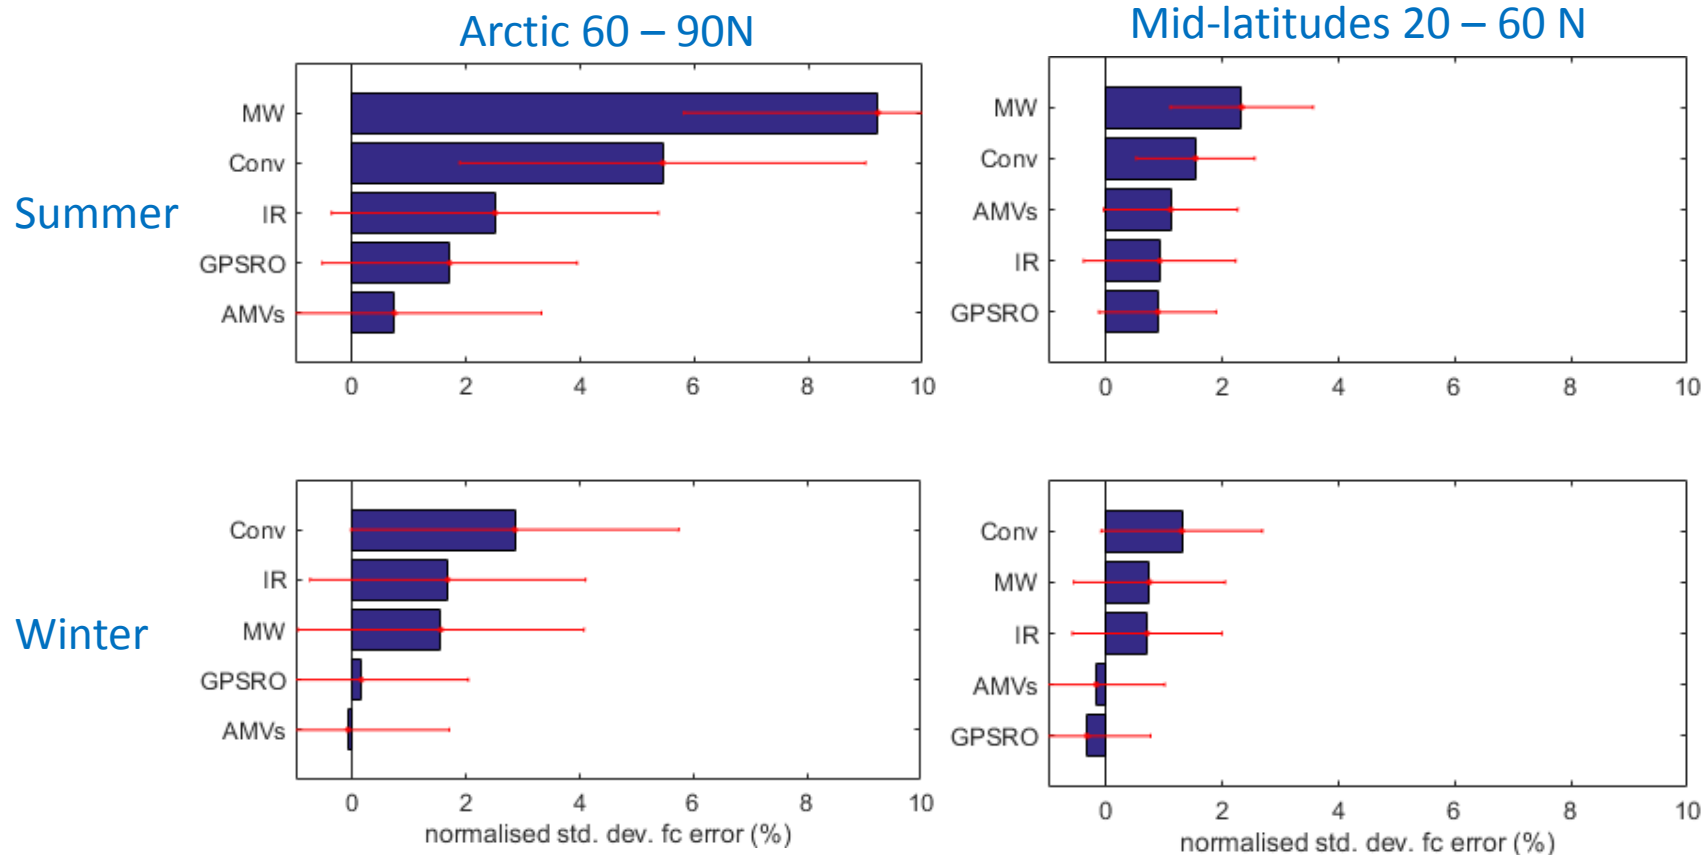

**MOSAIC**  
International  
Arctic Drift  
Expedition

# YOPP: Special Observing Periods (SOPs) and a MOSAiC-aligned Targeted Observing Period (TOP)

# YOPP Core Phase – Selected Highlights

## Observing System Experiments, Day 3, Z500

Summer:

- Microwave
- Conventional

Winter:

- Conventional
- Overall less impact, likely due to assimilation problems

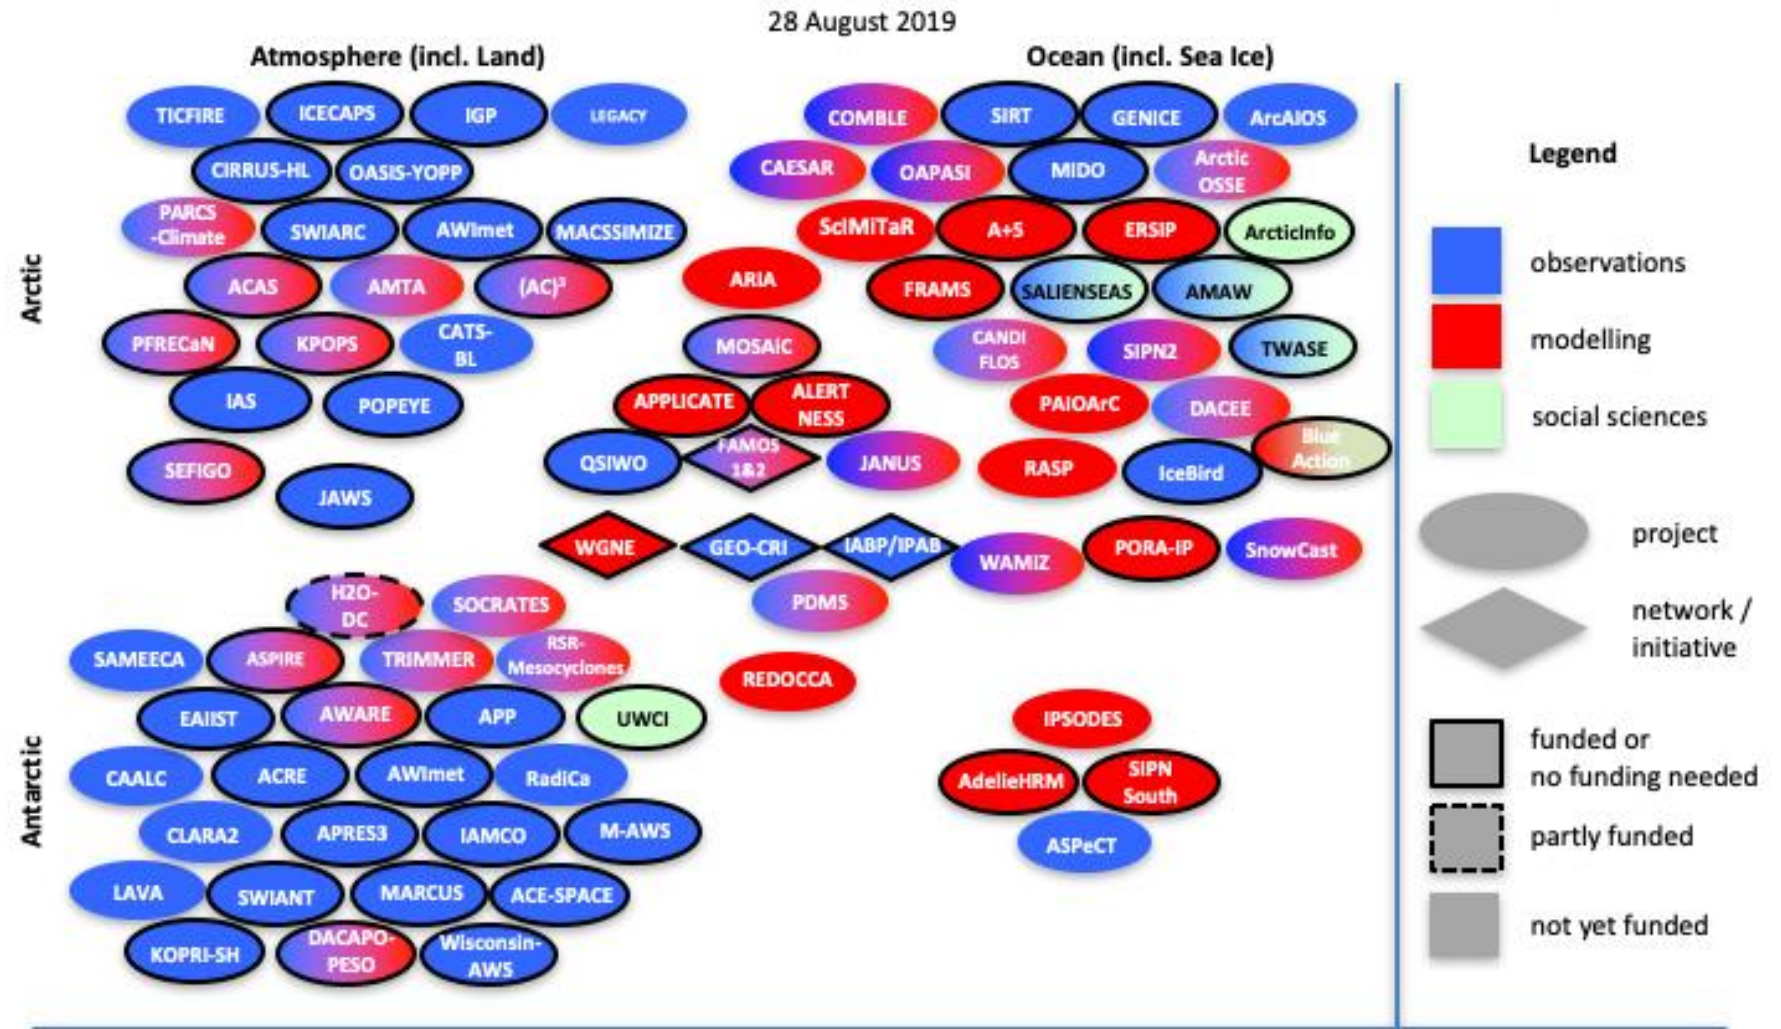

WMO OMM

Lawrence et al., 2019 QJRM

# YOPP Core Phase – Selected Highlights

85 projects  
endorsed by YOPP

# The YOPP Consolidation Phase – Elements

**Consolidating  
YOPP research**

**From research  
to operations  
and services**

**YOPP  
coordination  
Task Teams**

**Communication  
and outreach**

**Creating  
a YOPP  
legacy**

**Determining  
success**

+ data handling experts, observationalist and modellers

# YOPPsiteMIP

Arctic sites  
★ initial focus

Models: DWD, **ECCC**, **ECMWF**,  
FMI, MetNorway, MetOffice,  
NOAA/NCEP, **MeteoFrance**,  
**Russian Met**, CORDEX, CESM, ...

- IASOA (International Arctic Systems for Observing the Atmosphere)
- ECCC supersites – soon members of IASOA
- Cape Baranova – soon member of IASOA
- MOSAiC drifting station

In addition: Antarctic, Arctic Ocean and Third Pole sites

WMO OMM

**Supersites:** Suites of instruments measuring variables that lead to *process understanding*

**Models:** *High frequency column output on model levels at supersites*

**MIP:** Developed *Format and Semantics* used for both models and observations promoting *multi-model* and *multi-site process evaluation*

Data: Available through the **YOPP Data Portal** ([yopp.met.no](http://yopp.met.no))

Targeted processes: low-level clouds (including phase), stable boundary layers, atmosphere/snow interactions over land and sea ice, coupling procedures (variables and frequencies), ocean mixing, ...

# YOPPsiteMIP data

- **Processes** is the target – time step data on model levels, including tendencies and corresponding high-resolution observational data
- **NetCDF** format – to bridge between NWP, Climate and academia
- Inspiration from GASS, CFMIP ... but taking it a step further to make sure the correct **terminology** and **conventions** are used and declared
- Model and observational files created in the same way i.e. we are using a Merged Data File Specification (**MDFS**) schema with a **Python** tool kit for creation of Merged Observatory Data Files (MODF) and Merged Model Data Files (MMDF)
- **Published** data sets (with DOI) **open access** (and FAIR) via the YOPP data portal <https://yopp.met.no>
- **Atmosphere**, ocean, sea-ice, land, ...
- A **workshop** is planned (April 2020 in Boulder) on how-to create files

# The IASOA Merged Observatory Data Files (MODF)

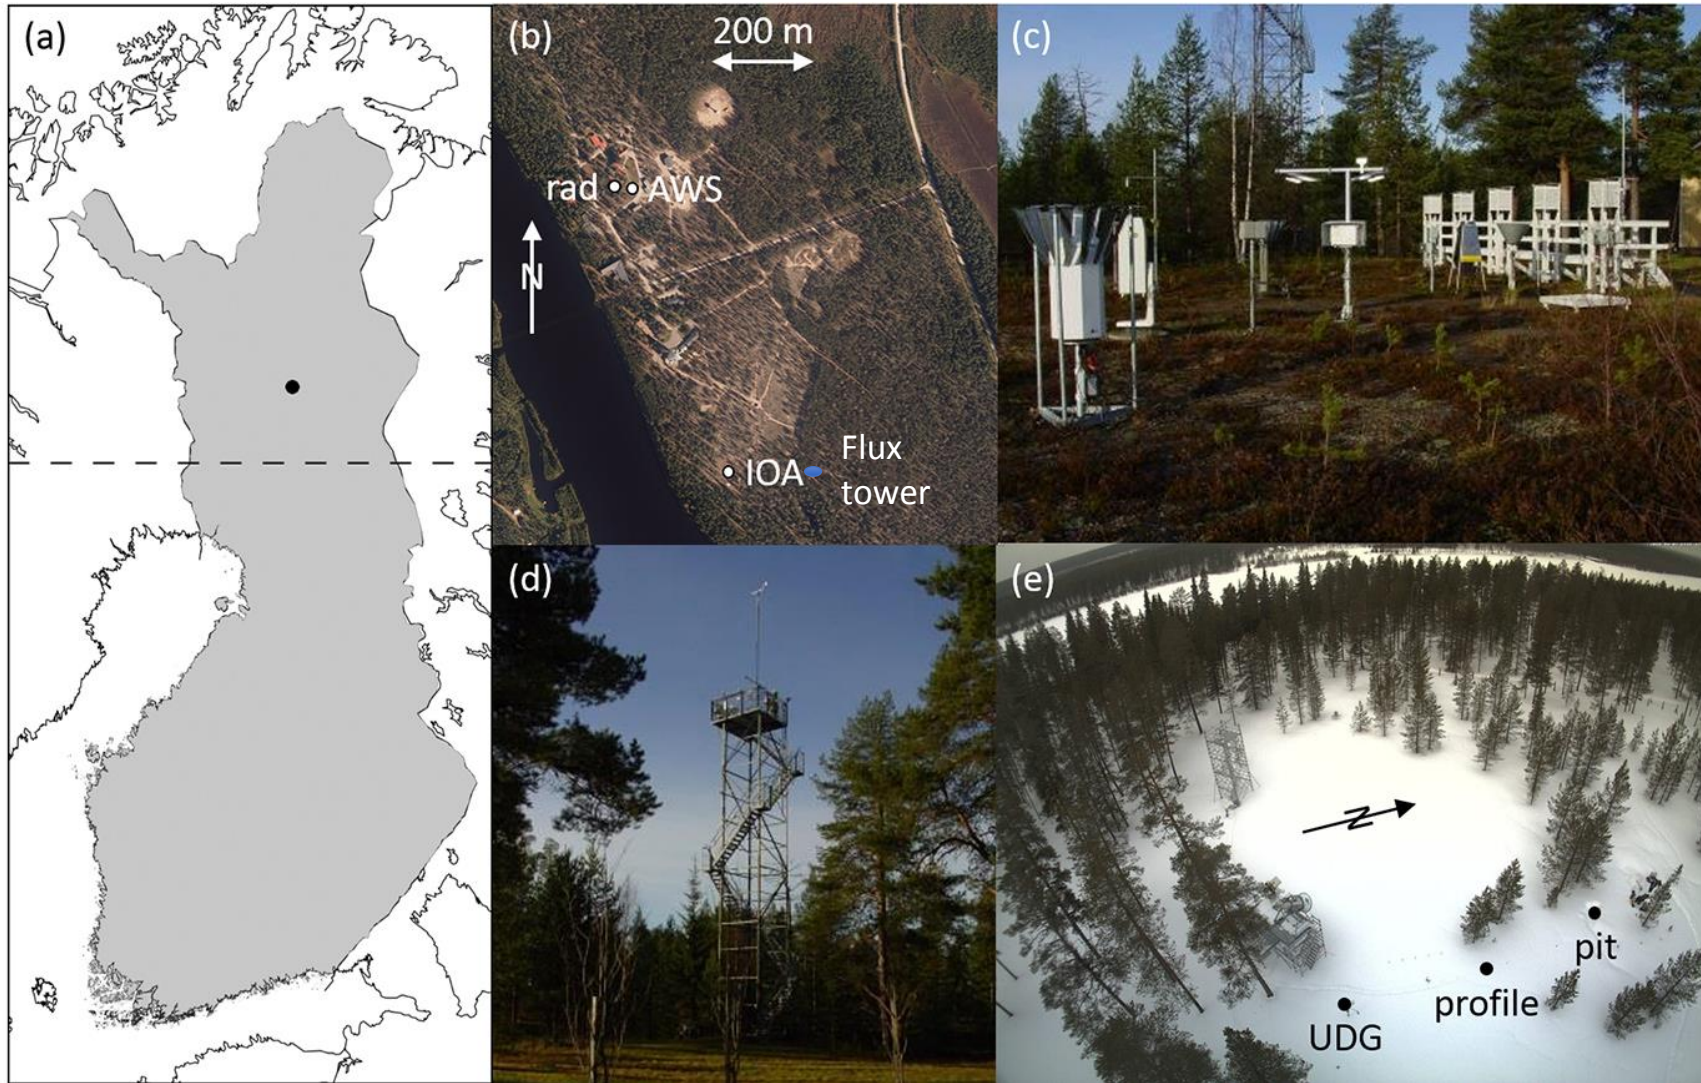

In support to YOPPsiteMIP, IASOA aims to provide a **unified file format** with **standardized quality controls and data processing**, which includes **all measurements** from all sensor, for each observatory.

# Process evaluation, Sodankylä

## Observations

## IFS

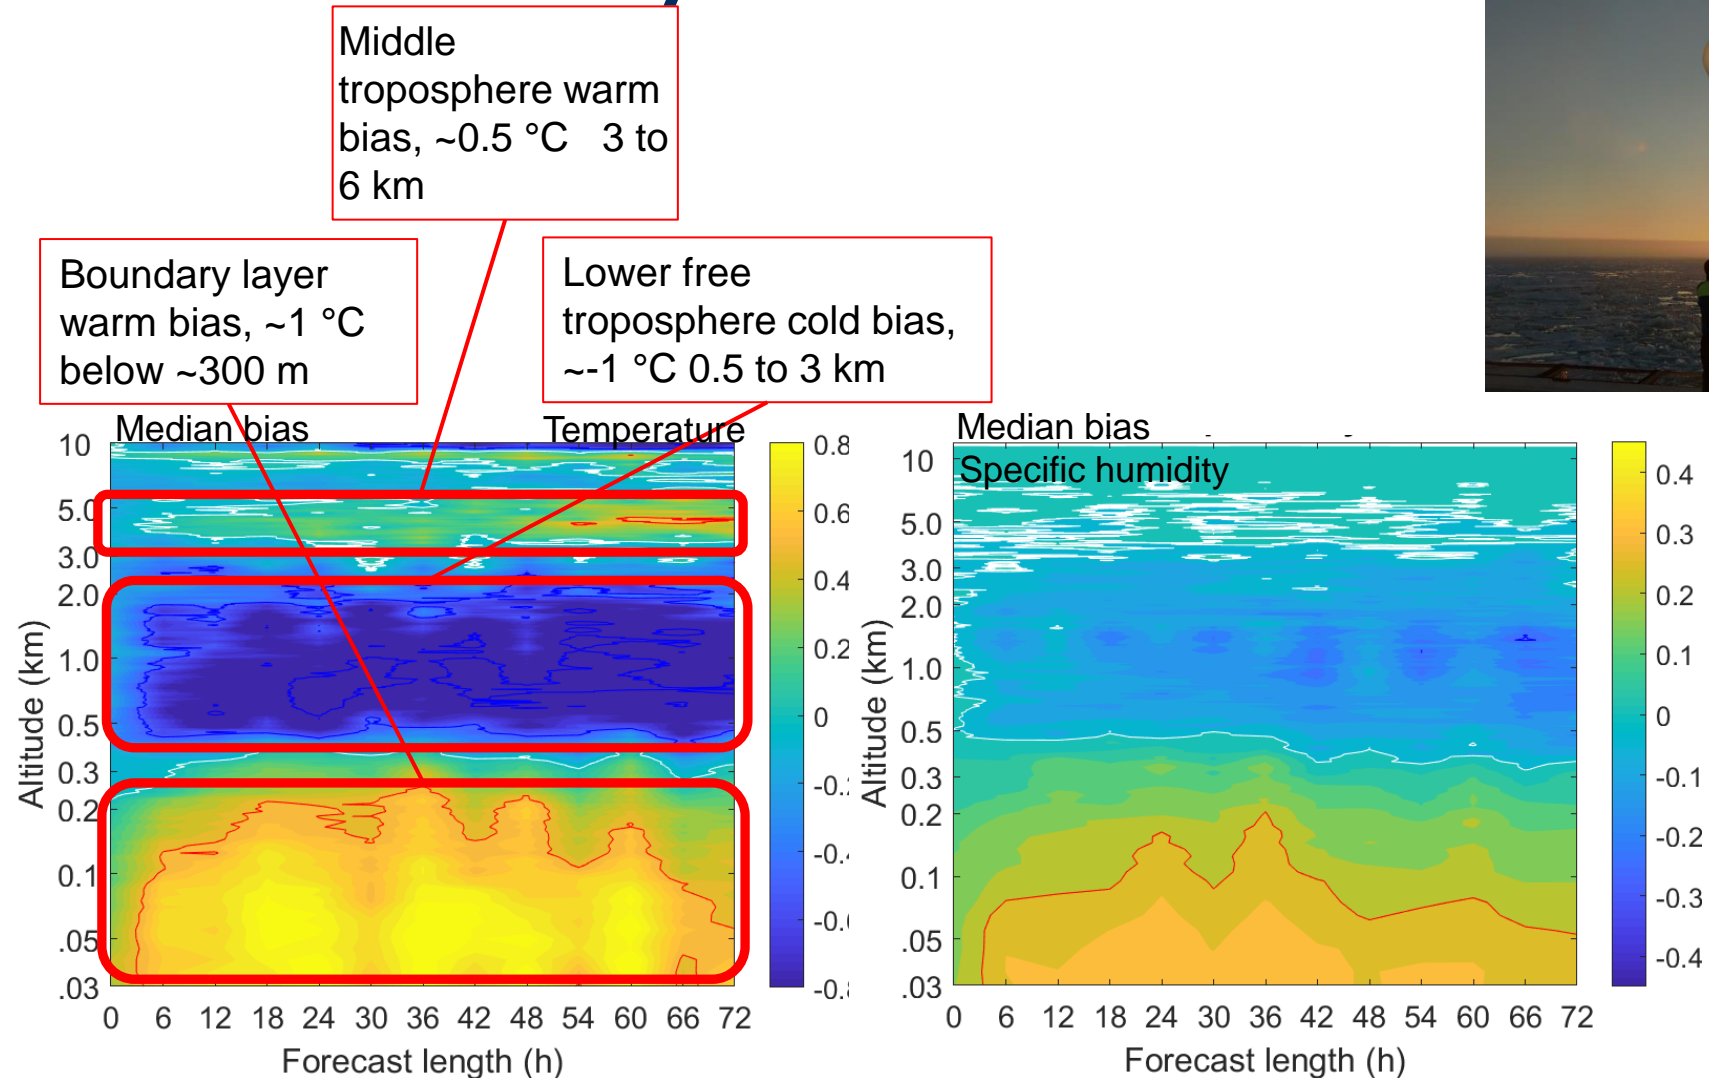

# Arctic Ocean 2018

1 August – 21 September

**YOPP endorsed  
project during  
SOP-NH2**

# AO2018: Forecast evaluation of vertical thermodynamic structure

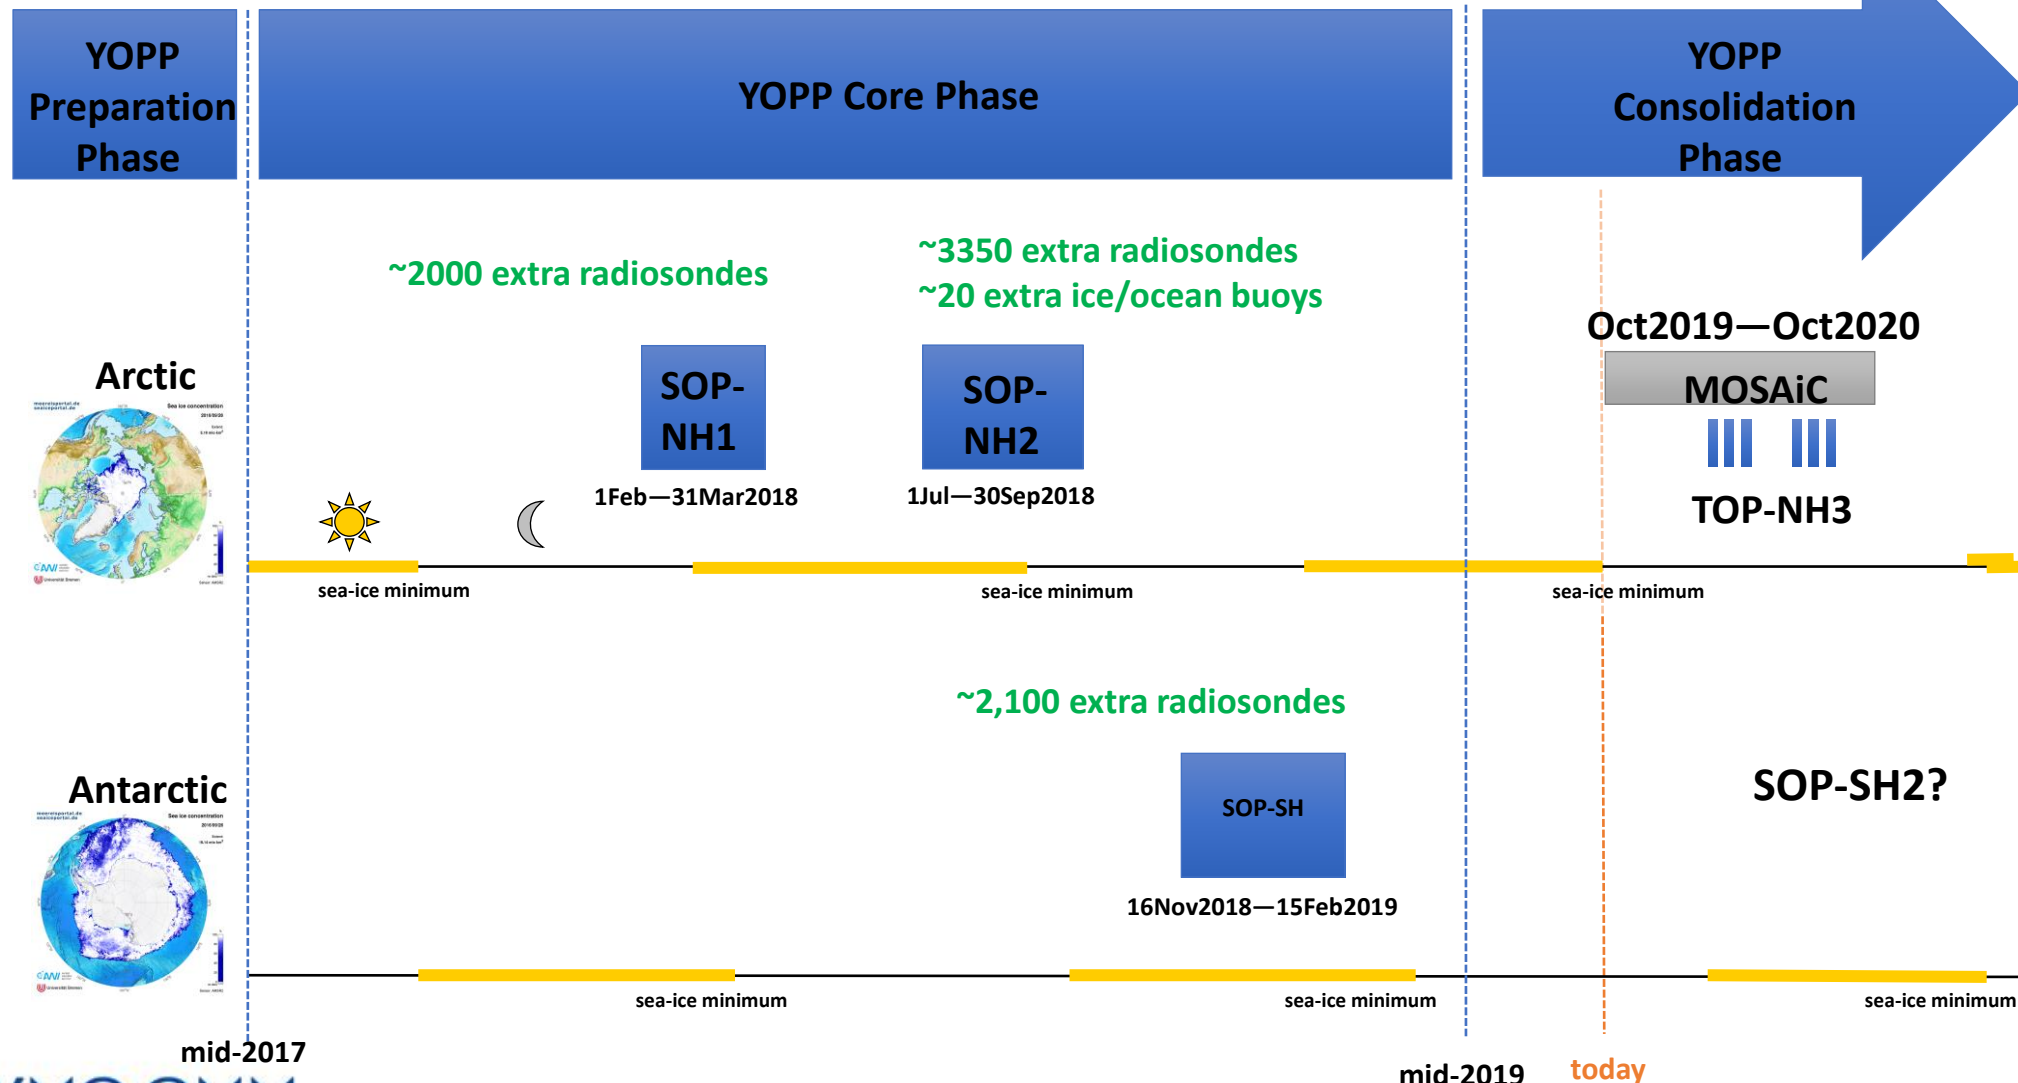

# YOPPsiteMIP data

- **Process evaluation diagnostics** that is being developed using the MODF and MMDF files for one model at one site can easily be expanded to several sites and/or other models
- A **site** can be an existing supersite or data from a research cruise as AO2018
- NWP are increasingly being coupled with the ocean and sea ice, additional processes to be evaluated

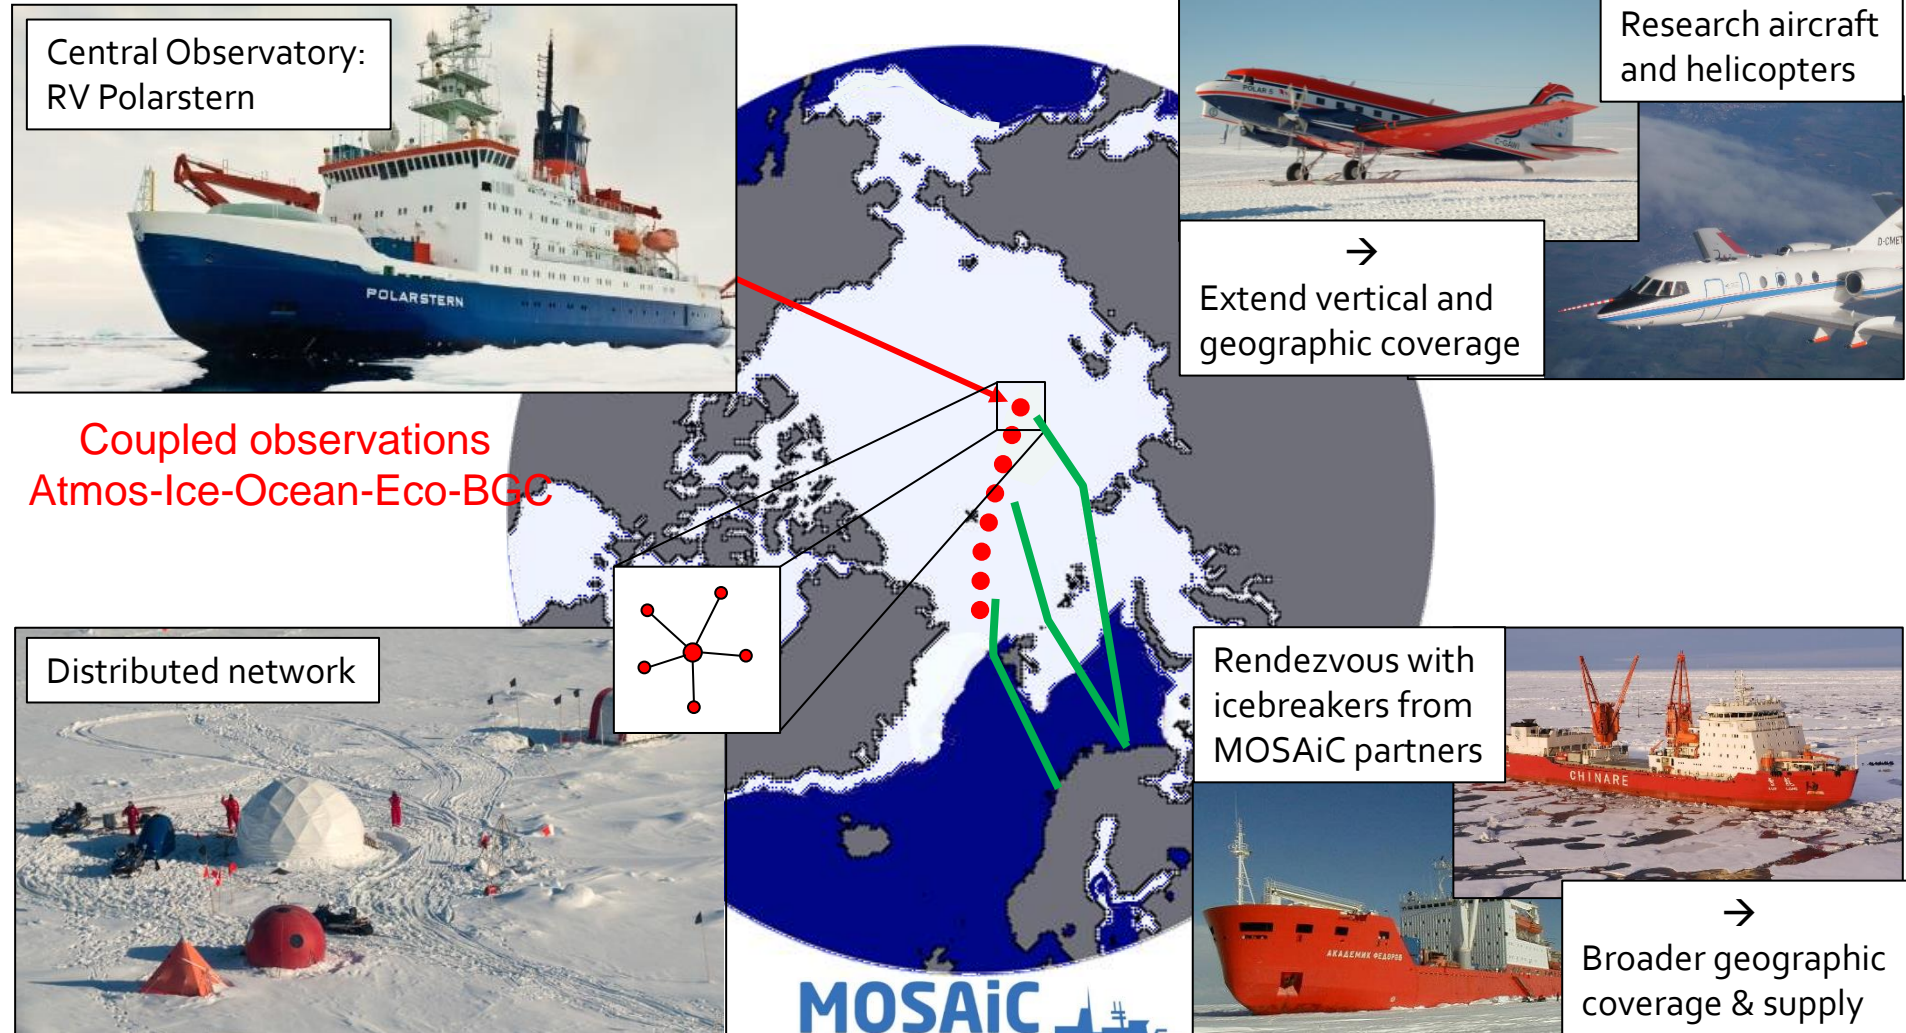

# YOPP: Special Observing Periods (SOPs) and a MOSAiC-aligned Targeted Observing Period (TOP)

# A Year in the Arctic

September 2019 – October 2020

WMO OMM

Autonomous systems,  
buoys, UAS, AUV

International  
Arctic Drift  
Expedition

MMDF files that are created for the MOSAiC site and uploaded at the YOPP data portal will be presented in near-real time at a dedicated website

Will be launched when MOSAiC observations are coming on GTS!

# MOSAiC Forecast Verification

Observatory for the Study of Arctic Climate (MOSAiC) expedition is a year-long expedition into the Arctic Ocean from October 2019 and ending near the Fram Strait October 2020. The primary goal of the expedition is to provide a comprehensive dataset for the verification of short-term Arctic system forecasts from a variety of models, so that they can be more accurately integrated into climate models. The MOSAiC expedition will provide data: MeteoFrance, ECMWF, NOAA ESRL, MetNo, Russian Met .... More are welcome!

BASE

# YOPP and MOSAiC

- MODF will be created for **MOSAiC** data after each leg (approx. 2 months) when more process evaluation will be performed
- **MIP** periods will be identified during the year after each leg for extra modeling
- **Targeted Observation Periods** (TOPs), preferably at the time of aircraft observations, will be identified and requests of additional soundings may be issued
- Airmass transformations – Warm air intrusions and cold air outbreaks are in focus

## Atmosphere (Polar 5 & 6)

**SPRING (160 h)**

16 March – 07 April 2020

**SUMMER (100 h)**

28 August – 15 September 2020

## Sea Ice & Snow (Polar 5)

**SPRING (80 h)**

24 April – 15 May 2020

**SUMMER (50 h)**

31 July – 17 August 2020

Total flight hours, including  
Ferry- and Test flights: 500 h
